COSYS Cloud

Use the COSYS Cloud to implement digitalization and your innovations in the company faster!

COSYS Cloud

- COSYS innovative enterprise platform

- Covers all major business areas of different industries and combines them with a modern, user-friendly application

- for you the most flexible and fastest access, to the COSYS applications

- the COSYS backend, consisting of application software COSYS WebDesk, COSYS WebService, and possible Use interface modules easily - as **software as a service**

COSYS Cloud offers you:

Reliability
With the COSYS Cloud, your backend remains accessible and efficient even during peak loads. Thanks to fail-safe cloud infrastructure (from 99% or depending on the SLA), we ensure speed and reliability. This is how we ensure the operation of the entire solution.

Flexibility
With the COSYS Cloud, you can access your data anytime and anywhere, even across locations, in the field or from your home office.

Security
The COSYS servers are located in Germany. We offer you the highest level of data protection through secure and encrypted access.

Future
We are continuously developing COSYS Cloud Services. We take up new technical services and integrate them into our service portfolio. In this way, we provide you with a reliable foundation for your projects.
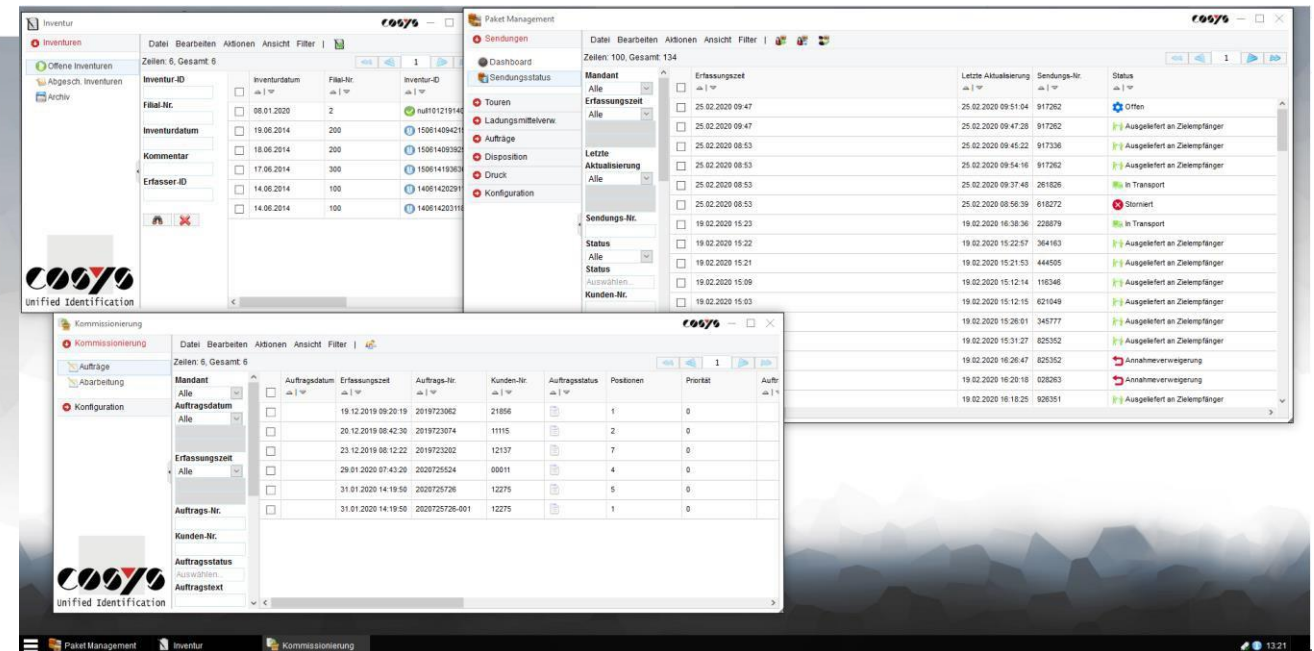

Your advantages of the COSYS Cloud

- No installation effort, no server provisioning required by customer's own IT or within customer's own infrastructure

- Provision of the COSYS software as Software as a Service

- Simple, cost-effective, flexible and fast deployment, including demo systems and test setups

- permanent and worldwide accessibility

- COSYS Webdesk can be run directly from the Internet browser

- Lower capital commitment, no costs for own server and thus higher flexibility

- expandable through COSYS modular architecture, individual modules can be added and upgraded at a later date

- Security and flexibility thanks to various backup variants and optional third-level support as well as Maintenance of the application software with an SLA (service level agreement) for solution operation

COSYS WebDesk

## Application software, part of the COSYS backend

- Central control element of the COSYS Cloud solutions in the form of a web-based administration and post-processing software with overarching and solution-specific modules

- offers e.g.: Administration of users, groups, roles and rights , overview and management of your master and transaction data, Device management, dashboards and further evaluation options

Diverse interface options of the COSYS Cloud

Connection of the COSYS backend to different databases, files as well as ERP and customer systems

The available interfaces of the COSYS Cloud can be divided into the following 3 upper categories:

COSYS Backend

Datendateien

COSYS file import/export

Datenbank

COSYS Cloud Sync

Webservices

COSYS WebServices

Diverse interface options of the COSYS Cloud

Connection of the COSYS backend to different databases, files as well as ERP and customer systems

COSYS WebServices

- easy communication between COSYS system and other ERP/customer systems as if they were one (machine-to-machine (M2M) communication)
- Independent of platforms, operating systems and processes
- Requests and answers of the customer WebService and the COSYS WebService are continuously exchanged automatically
- COSYS Cloud WebServices provide defined functions for writing and reading data to and from the COSYS backend
- Services can be used from anywhere thanks to Internet connection

COSYS Cloud Sync

- Database synchronization between two databases (source database and target database)
- COSYS CloudSync Client is installed on the respective client on which the database is running in your local network
- COSYS Sync Client ensures that data is always up-to-date and synchronized bidirectionally between both databases
- Automation of synchronization e.g. via Windows task scheduling or cronjobs
- Configuration of synchronization logics and activation/deactivation of individual synchronization tasks can be easily configured via interface in the COSYS backend
- Possibility to use any number of COSYS CloudSync clients with different users and synchronization tasks
- no creation of specific im-/exporters necessary

COSYS file import/export

- Possibility to transfer data via file
- Import and export formats as well as the content of data files can be predefined by COSYS or you can define them customer-specific
- different variants for file import:
  - Variant A: Select file for upload
  - Variant B: Upload file in WebDesk via upload form
- Automation of file import via cronjobs
- an individual import template with the necessary import settings can be saved for each data import

Suitable COSYS Cloud complete solutions

All COSYS applications can be deployed and operated in the COSYS Cloud.

Production Management

Warehouse Management

Transport Management

CRM/Sales Management

Retail Management

Examples in practice:
- COSYS inventory software for annual/interval inventories
- COSYS package in-house software for internal logistics/house mail distribution
- COSYS Parcel Shop Software
- COSYS Warehouse Management Software for e.g. goods receipt, picking and dispatch completion reporting
- COSYS Inventory Management Software
- COSYS Transport Management Software for customer delivery/delivery proofs
- COSYS load management/container management software

Matching COSYS Cloud APPs

COSYS offers different APPs in the COSYS Cloud for free testing:
